

## Garage Shelter Kits

Garage Shelters for Boats & Cars

**Garage shelters** with sliding doors (no frozen zippers!) in a kit format which are ideal for your RV or as a boat shelter or even as a truck canopy. Great for machine shops, hobby shops, or simple storage. Many types of steel **garage shelters** with polyethylene tops and steel garage building kits are available. The ultimate in weather protection. **Call 1.800.922.4760 to order now!**

## Things to know about our Shelters...

### **Made in Canada**

For tough weather conditions

### **NO Zippers – We provide sliding doors only.**

Zippers are often the weakest part of the shelter. They tend to freeze in winter temperatures and it is too easy to scratch your vehicle. Some people have difficulty raising the zipper sufficiently on higher clearance shelters and Roll-up door systems do not work well after the cover ages and stiffens.

### **Bolted at each joint**

Other systems depend on the tightness of the cover to hold the frame together.

### **North American Steel**

Other systems use softer steel from China and Chinese galvanization processes are not standardized to the same rigid standards as with North American steel. Rigidity and overall strength is not compromised in our systems.

### **Welded Covers**

**Most** of our covers are heat sealed not sewn providing better water tightness, especially when the top ages or is tightened unto the frame.

### **Clearance height Specifications**

Although overall height is interesting information, Clearance height through the door is important.

### **Higher Clearance Heights**

We provide shelters in a large variety of clearance heights for a variety of farm and commercial applications.

### **Better Framing**

Our frames have more bracing, all thru-bolted for rigidity and overall strength. Most frames are OVAL FORMED for additional strength and are of a thicker gauge than most other manufacturers.
