SHELTER TRUSS FEATURES

Heavy-Duty Steel Frame

Triple-coated galvanized steel frame with crossrails and tapered leg design ensures frame integrity and superior stability in all directions.

Torque Winch Tightening System

Our Torque Winch allows precise PSI control of the cover tension and keeps it where it needs to be.

Steel Plate Connections

Ultra strong connections add to the durability and stability of ShelterLogic Engineered Structures.

100% Galvanized Steel

We use only high yield USA manufactured carbon steel for ultimate durability, rust protection and superior strength. Each tube undergoes a triple-coating process inside and out that leaves no naked metal exposed to the elements.
